ABOUT THE PRODUCT

The AVR 5000VA mains voltage stabilizer combines the functions of a voltage regulator and surge protection device. It automatically regulates the input voltage, improving its parameters when supplied from the local mains or a power generator.

The device suppresses interference introduced into the electrical mains by other devices. It can operate with computer systems, servers, routers, modems and network components.

AVR 5000VA is also designed to operate with consumer electronics equipment, including amplifiers and audio mixers, loudspeakers, music equipment, televisions, stereo systems, CD-DVD players and AV receivers.
