ABOUT THE PRODUCT

AVR 3000VA 8% SLIM is a mains voltage stabilizer combining the functions of a voltage regulator and surge protection device. It automatically lowers excessively high voltage and raises excessively low voltage, adjusting it to the appropriate level.

The device protects connected equipment from damage. W the safe voltage value is exceeded, it automatically disconnects the device from the mains. It also suppresses interference introduced into the electrical network by other devices and works with power generators.

The compact design and modern appearance allow the stabilizer to be used in both small and large spaces. AVR 3000VA 8% SLIM works with, among other devices, computer sets, servers, routers, modems and network components, as well as consumer electronics equipment such as amplifiers, audio mixers, loudspeakers, televisions, stereo systems, CD-DVD players and AV receivers.
