ABOUT THE PRODUCT

The AVR 10000VA 8% SLIM mains voltage stabilizer combines the functions of a voltage regulator and a surge protection device. It automatically reduces excessively high and increases excessively low input voltage to the appropriate level, helping protect connected devices against damage.

W the safe voltage value is exceeded, the stabilizer automatically disconnects the device from the mains. It also suppresses interference introduced into the electrical installation by other devices and is compatible with power generators.

AVR 10000VA 8% SLIM can be used with computer systems, servers, routers, modems and network components, as well as consumer electronics equipment, including amplifiers and audio mixers, loudspeakers, musical equipment, televisions, stereo systems, CD-DVD players and AV receivers.

The modern, compact design enables use in small and large spaces. The device is intended for wall mounting.
