ABOUT THE PRODUCT

The AVR PRO 30000VA 3% SERVO 3F mains voltage stabilizer is designed for automatic voltage regulation in three-phase installations. It combines the functions of a voltage regulator and a surge protection device, improving the parameters of power supplied, among other sources, by the local mains or a power generator.

The device compensates for excessively high or low input voltage and supplies stabilized voltage at the output. It also suppresses interference introduced into the electrical network by other devices.

The stabilizer uses a Servo motor control mechanism and is equipped with overload, overvoltage, excess-voltage, temperature and short-circuit protection.
