

AUTOMATIC VOLTAGE REGULATOR

AVR PRO 2000 (2000VA) 3%

The **AVR PRO 2000VA 3%** automatic voltage regulator combines the features of 2 devices: a voltage regulator and surge protection device.

The most important features:

- Stabilizes the voltage supplied at the stabilizer input
- Automatically reduces too high mains voltage and raises too low mains voltage to the appropriate level
- Protects connected devices against damage. If the voltage increases and exceeds a safe value, the stabilizer will automatically disconnect the device from the network, protecting it against damage
- Works with power generators
- It suppresses interference introduced into the electrical network by other devices

What devices does AVR PRO 2000VA 3% work with?

- Computer sets, servers, routers, modems, network components
- Electronics equipment, e.g. audio amplifiers and mixers, loudspeakers, music equipment, TV sets, stereo systems, CD-DVD players

What makes the AVR PRO 2000VA 3% special among other automatic voltage regulators?

PRO version with an innovative device. A special service build-in mechanism allows to use of a very small tolerance of voltage - 3%. It means that the output voltage will be very close to the target value, with the deflection of only 3%. This is very important concerning the sensitive electronic devices.

Main technical data:

MODEL	AVR PRO 2000VA 3%
Power	2000V
Voltage range	100-260VAC
Frequency	50Hz
Voltage	230V
Precision	3%
Delay time	6s
Protection	High/low voltage protection, overload protection, high temperature protection, cicruit protection
Dimensions/Weight	168x255x146mm/6,7kg
Gross dimensions/Gross weight	320x205x190mm/7,1kg
Multipack dimensions/Multipack weight	425x335x210mm/14,5kg
