ABOUT THE PRODUCT

RACKUPS 2000VA/1200W 2×9Ah UNINTERRUPTIBLE POWER SUPPLY [RACK] is a device designed to provide uninterrupted power to computers and network devices. It is designed for installation in the RACK 19 standard, making it suitable for small and medium-sized server cabinets.

The power supply uses Line-Interactive technology and an AVR module, which stabilises the mains voltage and helps protect connected devices against sudden voltage surges. The cold-start function enables the device to be started from the built-in batteries without being directly connected to the mains AC.

The clear LCD display allows monitoring of the most important operating parameters, while the microprocessor-based control system ensures efficient device operation. The power supply is equipped with two 230V power sockets for maintaining the operation of devices and three computer sockets 230V. The built-in handles facilitate installation in the telecommunications cabinet.
