ABOUT THE PRODUCT

The AVR 500VA mains voltage stabilizer combines the functions of a voltage regulator and a surge protection device. It automatically regulates the input voltage, improving its parameters, among other situations, when supplied from the local power grid or a generator.

The device also suppresses interference introduced into the electrical grid by other devices. It can operate with computer systems, servers, routers, modems and network components, as well as consumer electronics equipment, including amplifiers and audio mixers, loudspeakers, musical equipment, televisions, stereo systems, CD-DVD players and AV receivers.
