ABOUT THE PRODUCT

The AVR 1000VA mains voltage stabilizer combines the functions of a voltage regulator and a surge protection device. It automatically regulates the input voltage, improving its parameters from sources including the local mains or a power generator.

The device suppresses interference introduced into the electrical network by other devices. It is designed for use with computer sets, servers, routers, modems and network components, as well as consumer electronics equipment, including amplifiers and audio mixers, loudspeakers, music equipment, televisions, stereo systems, CD-DVD players and AV receivers.
