ABOUT THE PRODUCT

AVR 3000VA 8% VOLTAGE STABILIZER combines the functions of a voltage regulator and a surge protection device. It automatically regulates the input voltage, improving its parameters when supplied from the local mains or a power generator.

The device also suppresses interference introduced into the electrical grid by other devices. It can be used with computer systems, servers, routers, modems and network components, as well as RTV equipment, including audio amplifiers and mixers, loudspeakers, music equipment, televisions, stereo systems, CD-DVD players and receivers.

AVR 3000VA is intended for indoor use and is equipped with overload, undervoltage, overvoltage, temperature and short-circuit protection.
