ABOUT THE PRODUCT

The AVR 10000VA mains voltage stabilizer combines the functions of a voltage regulator and a surge protection device. It automatically regulates the input voltage, improving its parameters when supplied from the local mains or a power generator.

The device suppresses interference introduced into the electrical network by other devices. It can be used with computer systems, servers, routers, modems and network components.

AVR 10000VA is also intended for consumer electronics equipment, including audio amplifiers and mixers, loudspeakers, musical equipment, televisions, stereo systems, CD-DVD players and AV receivers.
