ABOUT THE PRODUCT

The AVR PRO 10000VA 3% 3F mains voltage stabilizer combines voltage regulation with surge protection. It is designed for automatic regulation of the voltage supplied from the local mains or a power generator.

The device operates in three-phase mode, correcting excessively low or high input voltage and supplying stabilized voltage at the output. It also suppresses interference introduced into the electrical network by other devices.

The stabilizer is equipped with overload, undervoltage, overvoltage, temperature and short-circuit protection. Regulation is provided by a Servo motor-driven mechanism.
