ABOUT THE PRODUCT

The AVR PRO 15000VA 3% SERVO 3F THREE-PHASE VOLTAGE STABILIZER [3-PHASE] combines the functions of a voltage regulator and a surge protection device. It automatically regulates the input voltage, improving its parameters when powered from the local mains or a power generator.

The device operates in three-phase mode, balancing excessively high or low input voltage and supplying stabilized voltage at the output. It also suppresses interference introduced into the electrical network by other devices.

The stabilizer is equipped with a Servo motor control mechanism with a toroidal transformer, as well as overload, undervoltage, overvoltage, overtemperature and short-circuit protection.
