

AUTOMATIC VOLTAGE REGULATOR

AVR PRO 5000 (5000VA) 3%

The AVR PRO 5000VA 3% automatic voltage regulator combines the features of 2 devices: a voltage regulator and surge protection device.

The most important features:

- Stabilizes the voltage supplied at the stabilizer input
- Automatically reduces too high mains voltage and raises too low mains voltage to the appropriate level
- Protects connected devices against damage. If the voltage increases and exceeds a safe value, the stabilizer will automatically disconnect the device from the network, protecting it against damage
- Works with power generators
- It suppresses interference introduced into the electrical network by other devices

What devices does AVR PRO 5000VA 3% work with?

- Computer sets, servers, routers, modems, network components
- Electronics equipment, e.g. audio amplifiers and mixers, loudspeakers, music equipment, TV sets, stereo systems, CD-DVD players

What makes the AVR PRO 5000VA 3% special among other automatic voltage regulators?

PRO version with an innovative device. A special service build-in mechanism allows to use of a very small tolerance of voltage - 3%. It means that the output voltage will be very close to the target value, with the deflection of only 3%. This is very important concerning the sensitive electronic devices.

Main technical data:

MODEL	AVR PRO 5000VA 3%
Power	5000V
Voltage range	100-260VAC
Power consumption without load	11W
Frequency	50Hz
Voltage	230V
Precision	3%
Delay time	6s
Protection	High/low voltage protection, overload protection, high temperature protection, cicruit protection
Dimensions/Weight	302x260x146mm/12,5kg
Gross dimensions/Gross weight	385x360x220mm/13,8kg
Multipack dimensions/Multipack weight	400x380x240mm/13,8kg
